REST ASSURED

CREATING LOCAL API SERVER

- tool - mockoon to create mock APIs.
- Using JSON SERVER we can create Mockoon APIs.
- We will need Node.js

Δ Command: to install json-server

→ `npm install -g json-server`

(-g for installing globally).

Δ Command: to start json-server

→ `json-server --watch db.json`

Note: `db.json` = filename

→ contain actual API data

Δ Create own data

→ goto `db.json` and change the default data to your data.

then test methods will be same.

Δ Put

VS

PATCH

1) When we need to update a heavy resource with multiple fields we use PUT

2) When we need to update partially update, we use PATCH.
