Δ Data files

→ tra contains data for request to be sent to
   the server

→ use double curly braces for data variables
   as {{ VariableId }}

→ and run the request collection through
   collection runner, where we can find an option
   for data files as data

→ We can use variables to the headers as we

14/Sept/2020

Δ Command to launch the API.

  — npm run start:dev

Δ Creating Collections.

⇒ goto Save ∨ and click on it.
→ type Request name
→ + Create collection
→ name it then click on ✓ checkbox
→ Then save

Δ Add to collections

→ just create new request and add it to the existing collection by selecting name of collection instead of creating new collection.

Δ Adding books to Wishlist

// Its an activity that is ~~performs~~ Nate Taylor
// is performing to add a book to a wishlist in
// the demo API.

→ http://localhost:3000/Wishlist/1/books/1.

14/sept/2020

△ getting all books from household in demo API.

- https // localhost:3000 / households/1/wishlist books.

△ Collection Runner

- hover over collection and run collection
